

## Provider Notice

Magellan of Virginia is collaborating with inpatient providers to increase the likelihood of members attending follow up appointments after they are discharged from the hospital. Participation in outpatient treatment shortly after an inpatient discharge may help decrease the chance of inpatient readmission and allow the member to continue making treatment gains in the least restrictive environment.

Magellan has created an [Inpatient Discharge Checklist](#) to provide guidance to inpatient providers in the discharge planning process. The checklist includes important items to consider when a member is stepping down from inpatient care. The discharge checklist can be found on the Magellan of Virginia website, under the Discharge section:
