

Provider Notice

Magellan of Virginia wants to ensure that all members receive the needed services and supports to assist them on their recovery journey. It is critical that care coordination is utilized for effective treatment planning, to ensure open communication between all treating providers and to confirm resources are well coordinated and integrated.

Please take a few minutes to complete a brief **(eight-question)** survey related to care coordination.

This survey will provide us with valuable information on how Magellan can help support providers in their efforts to collaborate with other health care providers who are involved with a member's mental or physical needs.

Please note that responses to survey questions are anonymous.

Please access the survey at the below link and complete the survey(s) by close of business on March 15 2017.
